

新しいレーザ操作の提案：マルチビームで捕捉し、高速に操作するには？

1. Abstract

For complicated manipulation of the cells, we developed Integrated Optical Tweezers(IOT) by using Time-shared Scanning method(TSS) for **high speed manipulation** and Generalized Phase Contrast method(GPC) for **trapping a lot**. And we fabricated **SU-8 microtools** which suit for the IOT with **photolithography** for productivity. At last, we made experiment system and confirmed the effectiveness.

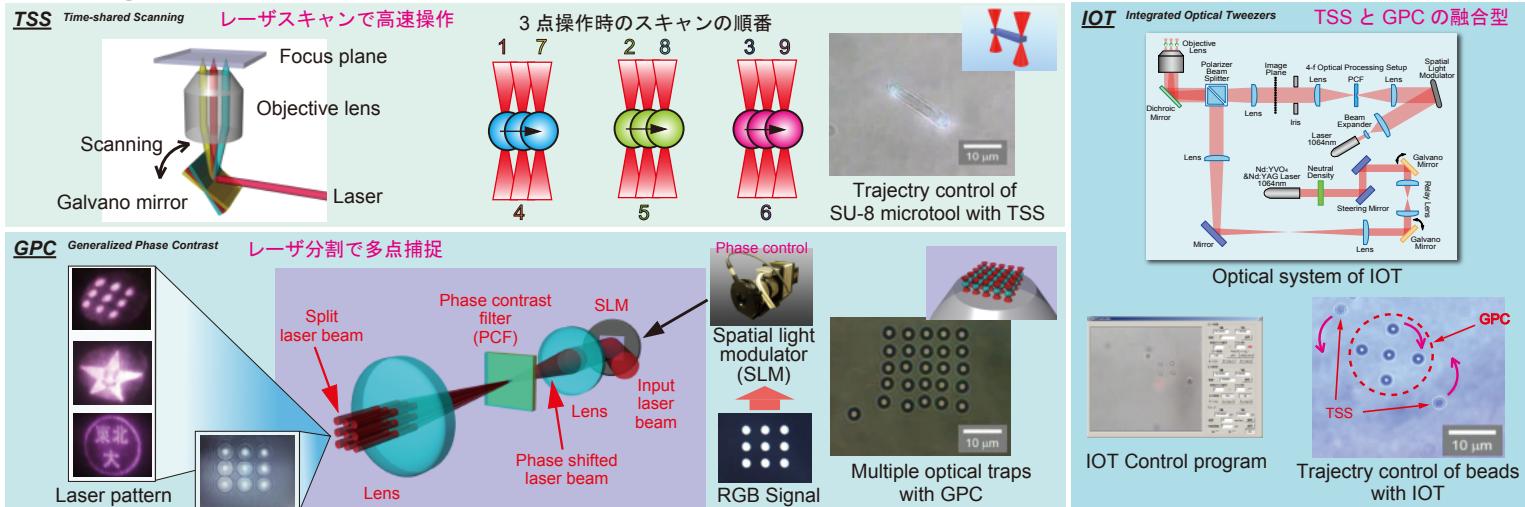

2. Motivation

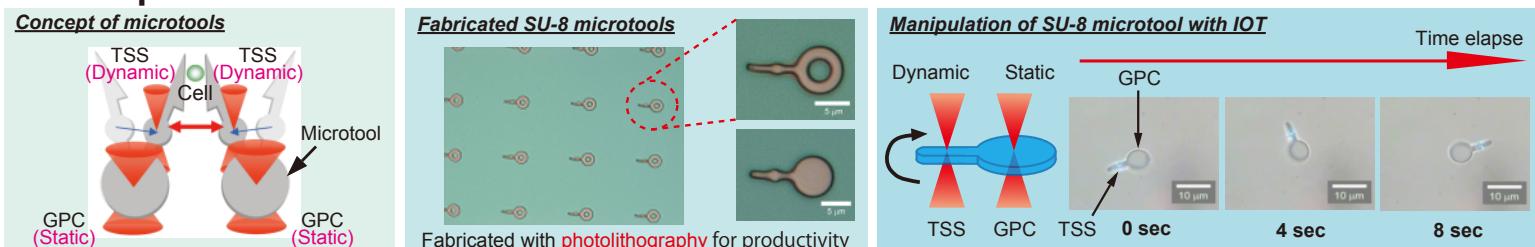

Comparison of laser manipulation

	Time-shared Scanning (TSS)	Generalized Phase Contrast (GPC)	Computer Generated Hologram (CGH)
2D Trajectory control	Small num. Fast*	Slow**	Slow**
	Large num. Slow*	Slow**	Slow**
3D Trajectory control	Small num. Very Slow*	Slow**	Slow**
	Large num. Not recommended*	Slow**	Slow**
Response speed	Small num. Fast*	Slow	Slow
	Large num. Slow*	Slow**	Slow**
Computation	Small num. Simple	Simple	Complex
	Large num. Complex	Simple	Complex
Stability	Small num. Stable	Stable	Stable
	Large num. Unstable	Stable	Stable
Laser power (Trap force)	Large	Weak**	Weak**
Hardware	Simple	Complex	Complex

3. Integrated Optical Tweezers (IOT)

4. Manipulation of SU-8 microtool with IOT

5. Conclusions

- 複雑な細胞操作を目的として、TSS と GPC を融合した、高速操作と多点捕捉が可能な融合光ピンセット (IOT) を構築した。
- IOT に適したマイクロツールを設計し、生産性に優れたフォトリソグラフィを用いて作製した。
- 作製したマイクロツールを IOT を用いて操作し、有効性を確認した。
